

NORTH HALF MASK AIR RESPIRATORS

HALF FACE

With a silicone face-piece, these respirators are available in half-mask with cradle suspension. Extended side flanges create good seal during talking and other facial motions. Cartridges low and farther back than many respirators for improved side vision. Exhalation valve with low breathing resistance. This unit is easily disassembled for cleaning.

FULL FACE

The North 7600 Standard features include the dual cartridge silicone full face piece, chin cup, oral/nasal cup, speaking diaphragm, and over 200 degree field of vision. The hard coated polycarbonate lens protects the wearer's eyes and face against irritating gases, vapors and flying particles. The polycarbonate lens also features optical properties similar to the Norton 180 Protective Spectacle to minimize distortion and astigmatism.
