

GROWER TIPS

THE INDUSTRIES GUIDE TO MARKETING CONTAINER PLANTS - SUMMARY & SUGGESTIONS.

The Uniform Weights and Measures Law and Uniform Packaging and Labeling Regulations is monitored by the National Conference on Weights and Measures (NCWM) and is enforced by the state or subsidiary government, weights and measures personnel. The purpose of this law is to assist consumers in "comparing similar products" by using uniform and consistent price and quantity information on the product or package and in advertising and signage.

MANUFACTURERS' RESPONSIBILITY

It is the responsibility of the container manufacturers to make available the volume measurements (imperial and metric) of their various containers to the grower.

WHOLESALE GREENHOUSES' AND NURSERIES' RESPONSIBILITY

Wholesale Greenhouse and Nursery growers are responsible for supplying the following information to the retailer.

DECLARATION OF IDENTITY

is the name of the plant material in the container. The terms "assorted annuals" or "assorted perennials" can only be used when the container has more than one annual or perennial. Otherwise the container must identify the particular plant material such as daises or impatiens.

DECLARATION OF NET CONTENTS

can be described in terms of weight, measurement or volume. Since volume in the past has always been the most popular and standard means of marketing plant material, it has been recommended that volume measurement continues to be the means of declaring the net contents. This is the easiest and most efficient means compared to the alternative options. The law requires the volume of the container be identified in both Imperial measurement (fluid ounces - **fl oz**, pint - **pt**, quart - **qt**, and gallon - **gal**) and Metric measurement (milliliter - mL, and liter L). Measurement must always be in a minimum of the largest whole measurement. For example, instead of using 24 oz for this measurement the proper measurement would be 1.5 pt. Market Pack contents would be displayed by identifying the volume of the individual cell and then totaling all cells of the pack to arrive at the total pack volume. For example, a 606 pack volume would be displayed as; **6 cells x 2 fl oz (60mL) Total 12 fl oz (360mL).**

DECLARATION OF RESPONSIBILITY

provides the consumer with the vendor, distributor or retailer reporting the Declaration of Identity and Declaration of Net Contents for the accuracy of this information. This information also allows the consumer to compare similar products and pricing. This information must contain the responsible business name, city, state and zip code. This responsibility is not required when the container is grown on the same premise as it is being retailed on. Retailers must determine how to handle this information. Some retailers would want to Declare Responsibility themselves using their retail name and location. Some retailers may want the wholesale grower to provide this information in a fashion such as;

Grown for : ABC Garden Center
Washington, DC 00000

Grown by : Wholesale Growers
Anytown, Anystate 00000

However accomplished, it is the responsibility of the wholesale grower to report this information to the retailer so the retailer in turn will have the information to report to the consumer. Some growers wholesaling to retailers may be required by the retailer to report this information on the pot and some may not. Maryland Plants & Supplies, Inc. recommends that all the required information above should at least be offered on the invoice to the retailer stating **"All the required Weights and Measures information is noted on this invoice and it is the responsibility of the retailer to accurately display this information as required by the National Conference on Weights and Measure"**.

RETAILERS RESPONSIBILITY

It is the responsibility of the retailers to make sure all this information is properly displayed to the consumer in order to avoid any penalty. Presentation of the Declarations can be fulfilled by either signage or container labels. Product advertising that includes any pricing must also provide the declaration of net contents. It is no longer acceptable to display or advertise terms like 4" pot, 10" hanging basket, trade gallon or large quart and using the terms of inches or trade sizes on container displays or advertising.

This is a brief summary of the "Industry Guide To Marketing Container Plants" prepared by ANLA with assistance of SAF, NAHSA, PMA, and OFA. The entire publication can be found on the Maryland Plants & Supplies, Inc. website. For more information visit www.marylandplantsandsupplies.com.

OASIS® GROWING MEDIUM

OASIS Growing Mediums are rigid, open-celled, water-absorbing foams specially designed for optional callus and rapid root development.

Available in various shapes and sizes to meet crop, labor and cost issues, OASIS Growing Mediums are general purpose propagation mediums for rooting vegetative cuttings. The Rootcube and Wedge are engineered to hold more water than OASIS *Hortcube* hydroponics product.

Features and Benefits:

- Sterile medium arrives pathogen-free, to reduce disease and insect problems.
- Ready to use in numerous configurations right out of the box.
- Engineered for optimal cell-to-cell performance, assuring proper drainage and water holding. Unique "Universal" star dibble accommodates most stem sizes for ease of sticking.
- Roots remain undisturbed during transplant, eliminating plant stock.
- Low caution exchange capacity for rapid nutrient availability.

OASIS FERTISS PROPAGATION PLUG SYSTEM

OASIS *Fertiss*, the soilless growing medium which keeps production costs low while producing healthy, vigorous starter plants.

OASIS *Fertiss* medium has been trailed extensively with highly successful performance on vegetative annuals and perennials, woody ornamentals, silviculture, tissue culture, and germination of seeds.

Composed of a special blend of long fiber sphagnum peat moss, perlite and vermiculite, the OASIS *Fertiss* mix is bound by cellulose nonwoven net. As roots enter the airspace between the fabric and the plastic tray cell wall, they are naturally air pruned.

Features and Benefits:

OASIS *fertiss* plug propagation offers a versatile system with key advantages.

- Ready-to-use plugs in a pre-filled propagation tray saves time and labor.
- Consistent and even media blend, pH adjusted.
- Loose, open mix makes it easy to insert and stick cuttings.
- Uniquely designed trays promote natural air pruning, encouraging development of dense, fibrous root system.
- Ideal for difficult to root cultivars.
- Long-lasting wetting agent added to enhance water-holding capabilities.
- Easy to transplant and transport.
- Stacked trays do not compress the plug media.

TLC® PLUG TRAYS

TLC plug trays have been re-engineered for improved de-nesting and uniformity. Structure is sturdy enough to use without a carry tray, TLC plug trays feature die-cut centered drainage holes and deeper cells to promote healthy root development and consistent drainage. TLC plug trays are compatible with most automatic seeders and transplanters, and indexed notches are standard for greater automation compatibility. The **"Ultra Series"** features the latest in plug tray technology. They are designed with surface vent holes for greater air circulation around foliage and precision perimeter trim. The 288 and 512 Common Element plug trays conform to the **"Common Element"** established by the combined efforts of major plug trays and equipment manufacturers. These standards will achieve uniformity among the most common sizes of plug trays and ensure compatibility between trays, automatic seeders and transplanting equipment. Tray dimensions 11" x 21.5". Standard color is black.

TLC® SPECIALTY PLUG TRAYS

Octagonal and Hexagonal plug trays are ideal for growers who prefer a six-sided or eight-sided cell design. Die-cut surface vents for greater air circulation around the foliage canopy. Compatible with most automated seeders and transplanters. Centered die-cut drainage holes. Ramps standard for labeling on all Octagonal and Hexagonal plug trays.

Nova plug trays are the most modern plug design and have been developed with extensive grower input. Standard ramps for labeling on all Nova plug trays. Innovative fluted cell wall design with root guides to improve air volume throughout the soil mix and to inhibit root spiraling. Centered die-cut drainage holes. Die-cut surface vents improve air movement around foliage canopy and decreases "water pooling" on the surface. Compatible with most automated seeders and transplanters.

The 20 TLC Row Seed Flat is a low-tech solution for propagation. It allows for removal of an individual row if there is concern for disease. Rigid stand-alone tray with burned drainage holes. Tray Dimensions 11" x 21.5". Standard color is black.

TLC® PRO-TRAY INSERTS

Pro-Tray inserts are the most economical tray for growers who do not use plug extractors or transplanters. They are compatible with most flat filling and dispensing equipment. They feature community watering channels for healthy plant development and uniform burned holes for consistent drainage. Tray dimensions 10.5" x 21".

ITML AZALEA INJECTION-MOLDED POTS

TRADITIONAL

The Traditional are full-sized pots with an increased soil volume with maximum UV root protection. Features a wide base for stability and strong rim design for durability. Has a gloss finish for a clean presentation. Also has side and bottom drainage.

ELITE/ULTRA

The most commonly used grower container. They have a shorter profile than Traditional Azalea pots and a uniquely designed rim for automatic handling. Designed to hold less soil volume than the Traditional Azalea pots. Features a dual drain bottom for optimum drainage and aeration. 6" Elite/Ultra Reservoir pots have a reservoir with a special high level drainage system.

REGAL

The Regal has a Traditional profile and collar that allows for maximum soil volume. The dual drain bottom allows for better aeration and superior drainage. A sturdy lip design for easy handling through automated potting equipment. The gloss finish enhances plant presentation.

ITML ROUND POT CARRY TRAYS

ITML Pro-Tote Trays are the best de-nesting trays in the industry. They are engineered for use with automated flat filling equipment and with strengthening ribs for superior handling characteristics. They are designed to work on roller conveyors and automated potting systems. Pro-Tote Trays feature a lowered sidewall ledge for added strength and a greater profile of branded pots.

ITML SQUARE INJECTION-MOLDED POTS

TRADITIONAL

- Attractive matte finish.
- High quality construction for maximum root protection from light penetration.

LITES

- Economically designed with a smooth sidewall.
- Specially adapted for automatic filling equipment and handling by mass merchandisers.
- Right angle corners to provide a pot-to-pot fit that avoids soil spillage.
- Used in conjunction w/Quickloc Trays for easy positive pick-up of pots.

KORDLOK

- Deep perennial square pots with integrated tag locking system, to hold tags in place from growers bench to retail checkout.

JUMBO

- Designed with large soil capacity to specifically accommodate perennial root systems.

T-SERIES & ELITE SQ.

- Use in conjunction with trays to assist in handling and labor savings.
- Squares fit pot-to-pot in their trays and run efficiently through automated flat filling systems.

ITML SQUARE POT CARRY TRAYS

KORD QUICK-LOCK TRAY SYSTEM

Eliminate individual pot handling by loading squares in Quick-Lock trays. Simply press and flip; the Quick-Lock mechanism clicks into place for a positive hold. Works with Kord Lite and KordLoc squares.

SQUARE ROOT POT & TRAY SYSTEM

The Square Root Pot & Tray System feature an improved tray design for 2008 with full-depth pockets and side wall cut outs. They have an eye catching design, round at the top for consumer appeal and square at the bottom for orientation in the tray. Four tag slots for grower tags are on the pots and the trays have tag slots to accommodate Flat Talker Cards. Pots and trays have been specially designed to orient the pot in the tray so that grower tags line up - creating an exciting visual presentation at retail locations. The pots also feature split level dual drain bottoms. Standard colors: Pots available in Terra Cotta, Custom colors are available, and trays available in black.

ITML HANGING POTS

The **DELUX** hanging pot features a strong rim, large soil volume and a high-capacity water reservoir making it the ideal choice for all your hanging plant material. Saucerless HP features center drain w/water reservoir. Outside saucer HP features optimum dual drainage.

The **TRADITIONAL** offers excellent value in a traditional style - large soil volume resulting in larger plants. Inside divider featuring center drain w/water reservoir. TagGrip standard to hold grower or retail tags.

The **SWURL®** Hanging pot has a distinctive, eye-catching swirl design and gloss finish that grab attention, making it a popular choice for growers and retailers. Rim designed for superior strength.

The **ELITE®** hanging pot with its "fluted" design gives this hanging pot a bold, impressive appearance and features a bottom with water reservoir and center drain.

PLUG TRAYS

Plug production may be the most technically advanced process in our industry. Specialized equipment has helped improve greenhouse operating efficiencies and as a measure to ensure plug growth uniformity and quality you need to choose a plug tray that you can depend on. T.O.P. plug trays provide you with the consistency your operation demands and for no additional charge you get trays with optional top surface ventilation holes, precisely centered-punched drain holes, and cell wall root ribs to promote downward root growth. This means higher yielding plug trays.

VACUUM-FORMED SQUARE POTS & CARRY TRAYS

T.O. Plastics SVD (square vacuum deep), SVT (square vacuum traditional), and SV (square vacuum formed) pots were designed with the growers best interests in mind - time, efficiency and quality. T.O. Plastics produce their pots and carry trays in a quality manner using high impact polystyrene. Their pots and carry trays provide growers with a durable and dependable combination second to none. Be sure to recognize their Press-Fill features. Your time is valuable and T.O.P. Press-Fill systems are sure to save you time and money. Standard Colors for SVD & SVT pots are black, green, terra cotta, and white. The standard color for SV pots and all carry trays is black.

PÖPPELMANN

POPPELMANN CONTAINERS

TEKU® products set the industry standard, not only because they are engineered with the most innovative plastic technology available, but also because their design is the result of their extensive horticultural experience and expertise. Only a company with our one level of knowledge could develop pots and containers that anticipate and meet every industry need. In addition to promoting fast irrigation and drainage, TEKU® products deliver smooth potting-machine through failure free destacking and optimum stability. TEKU® products can help you grow healthier plants while making your operation more efficient, more productive, and more profitable. Try TEKU® and see for yourself.

DOUBLE QUALITY

Thermoformed PREMIUM pots and containers from TEKU® are produced from a two-layer plastic sheet. The darker inside layer blocks light from the soil medium, protecting roots from mutation or damage that might impair growth.

STRONG U-RIM

The strong U-Rim gives thermoformed TEKU® PREMIUM pots and containers excellent side stability.

- Solid rigidity maximizes potting performances and workflow, even on fast-running potting machines.

POT SHOULDERS AND U-RIM

Both the strong U-Rim (TEKU® PREMIUM) and the strong pot shoulders (TEKU® CLASSIC) offer smooth workflow.

- Exceptionally suitable for use in

modern spacing-machine applications such as the Space-O-Mat.

FACET RIM

The innovative facet rim of thermoformed TEKU® PREMIUM pots and container is so outstanding that we have applied for a patent.

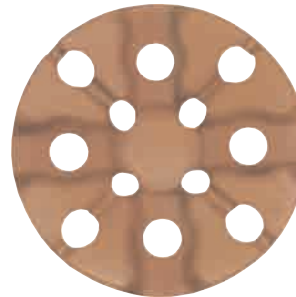

- Smooth destacking in potting-machine pot dispensers.
- Positioned directly under the U-Rim, the facet rim maintains separation sufficient to prevent jamming.

STACKING FEET

Like thermoformed TEKU® PREMIUM products, the modern injection-molded TEKU® CLASSIC series (TO...D, TO...BD, MXA, MCI, MCH et MQC) do not require inside stacking ridges. The feet facilitate stacking of TEKU® CLASSIC products.

- Absence of stacking ridges helps prevent root injury.
- Force Distribution runs uniformly in a single line from top to bottom (see illustration), so deformation is not a concern even with high stack heights.

MULTI-HOLE PROFILE BOTTOM

This special bottom design is distinguished by its high level of stability – on conveyor belts, for example – and by its multi-hole feature that encourages fast, thorough irrigation and drainage on three levels (1-3).

- Maintaining an optimum water-oxygen ratio in the soil medium results in fast growth and better plants.
- With irrigation time shortened, humidity stays low, reducing the risk of infection.
- Lower humidity also saves money by reducing heating costs.

MULTI-HOLE CROSS BOTTOM WITH FEET

This bottom profile, which features additional feet, offers excellent irrigation and drainage (dripping and capillary) on three levels (1-3), affording the same advantages as described for the multi-hole profile bottom (above).

MULTI-HOLES STAR BOTTOM

The multi-hole star bottom does not only provide excellent irrigation and drainage on three levels (1-3), the innovative bottom profile also offers an ideal transport solution.

- Space-saving, secure stacking of planted containers (4).
- Saves time and money during transport from potting machine to cultivation area and during shipping to customers.

MULTI-HOLE BOTTOM WITH HIGH FEET

The high-feet feature of this special bottom profile makes this pot ideally suited for large-area foliage cultivation on concrete, and ensures optimum irrigation and drainage on three levels (1-3).

- High feet (A) prevent moisture retention and facilitate smooth drainage.
- Feet prevent standing water from contacting the soil medium, so the risk of infection is reduced.
- Capillary drainage ridges (B) ensure complete drainage through bottom holes.
- Inwardly rounded feet (C) prevent damage to the sleeves.
- Design is also suitable for orchid cultivation.

Call your sales representative or customer service for more current pricing and availability.

BLOW-MOLDED NURSERY CONTAINERS

Nursery Supplies blow-molded nursery containers are made from 100 percent high density polyethylene, with sizes ranging from just under a quart all the way to 60 gallons. Whether standard (Custom) or heavy (Olympian) weight, both are durable, flexible and easy on the budget.

Side ribs, flutes, give strength while a unique bottom-edge corrugation design adds further to column rigidity on many of these wide-bottomed containers. Molded-in handles on the top rim on all #5 pots and above insure ease of handling to the field, out of the field, during shipping and at retail.

AGS "POT IN POT" ABOVE GROUND SYSTEM

Simply place the AGS on the ground, surround the base with mulch, and it's ready to go - no need to dig holes or trenches! The Bottom Unit holds any of the 6900 Series Grip-Lip containers. Because the AGS is above ground, the spacing and configuration can be easily modified to meet the changing needs of the grower or crop. The AGS can also be used on any type of ground, even soil with poor drainage. The AGS is an attractive durable stand that will grow and display plants and trees in the field or in the sales yard.

Liner (growing) pot not included. Must purchase separately.

PRESSURE FORMED CONTAINERS

Pressure forming is the newest manufacturing process in the product line, offering the greatest versatility while being the most environmentally and economically-friendly. Strong thin walls are developed through design - amplifying column strength on the larger cans - through the use of corrugation ridges. Material distribution - disbursing more to critical areas, rims and bottom edges - also enhances container strength. While, top-banding and rolled edges increase top rigidity. Also features raised drainage to promote healthy root system. The smooth finish is perfect for labeling and printing. Think of more than the required "weights and measures", think of dynamic colors and a clear message.

GRIP-LIP™

Originally designed for Pot-in-Pot growing, Grip-Lips evolved into a container series of over 20 sizes from one gallon to 25 gallons. The cushioned "Grip-Lip" is possible because of the rim's hollow, forgiving core making handling a comfortable chore. While the rim core is hollow, rim strength is maintained – strong enough to be carried by a forklift and last through years in the field in pot-in-pot. Stacking lugs combined with a cantilevered "shelf" aid strength, stacking and shipping performance. Available in two weights, Standard Grip-Lip and Economy Econo-Grip, feature all the positives of heavy-duty injection-molded containers without the cost.

POT-IN-POT SYSTEMS

Used in a growing or finishing field, this method promotes increased, controlled growth. The initial investment in product and time pays off quickly in return on investment and greatly reduces impact on the environment.

- Light-weight liner pot does not remove native top soil at harvesting
- Reduction of fertilizer run-off
- Re-use of the heavy socket pot with a light weight insert pot for source reduction
- Root ball maintains better temperatures
- Control the variables – media, fertilizer & water
- Consistent, confined root ball growth
- Harvesting happens anytime – no hard soils to dig into, no root damage – simply lift the pot out of the socket.

FIBERGROW® PATIO PLANTERS

KORD FIBERGROW® PATIO PLANTERS are available in 15 different shapes and sizes. Their natural earth tone textures make them desirable for patios, pool decks and garden settings. The superior growing characteristics of fiber allow these ornamental containers to breathe like clay and provide excellent root insulation from extreme temperatures.

FIBERGROW® HANGING POTS

KORD FIBER GROW® HANGING BASKETS enhance customer appeal and increase profit potential. 14 and 16 Wire Hanging Pot Cage Assembly includes a special, heavy duty clip-on Swivel Wire Hanger. The Wire Cage Assembly includes double welds for improved strength and reliability to securely support large fiber pots. Clip-on hangers reduce assembly and labor costs by easily attaching to the 14 and 16 Wire Cage Assembly System and the Swivel mechanism allows plant material to be rotated according to the light source and to turn in the wind.
